by Biology Alumni

Registration

Date: 17 March 2026 (Tuesday)
Time: 6:30 – 8:00pm
Venue: SC 128

About Our Speaker:

Ms. Angel SZE
R&D Manager,
Foshan Timely Biotechnology Limited

I am Angel Sze, R&D Manager at an orchid biotechnology company, where I lead the creation of new orchid hybrids and manage our tissue culture laboratory. I also collaborate with an agricultural research institute, studying floral traits behind Phalaenopsis diversity. My career has followed a non-linear path, enriched by diverse experiences in research laboratories, intellectual property, aquaculture health monitoring, and organic certification. These varied roles have built adaptable skills I draw on daily in orchid innovation. Passionate about turning science into beautiful plants, I'm excited to share my journey with you!

- Faculty Member, Hong Kong Green Building Council
- Board Member, Friends of the Earth (HK)
- Past President, International Society of Arboriculture Hong Kong Chapter (ISA Hong Kong)

Chiky Wong is an experienced arborist, landscape specialist and restoration ecologist. He developed his enthusiasm in plants and their relationship with human and wildlife since teenage years through gardening. After his restoration ecology research in postgraduate school, Chiky further established the connection with plants through his career. He has worked with NGOs, consultancies, contractors as well as the government on different projects covering broad disciplines such as landscape design, cultivation advice, planting practice, tree preservation, transplanting, standard audit and eco-tour design/implementation. His special interest in sustainable and functional planting motivates him for different researches.

As a pioneer tree specialist in Hong Kong, Chiky is the first batch of ISA Certified Arborist locally since 2007 when the awareness of tree management was just seeded in the territory. Currently he is one of a few Board Certified Master Arborist (BCMA) in the Asia-Pacific.
